

River Power Pod

Bringing Power to the Powerless

This project encapsulates so many aspects of the development work that CAFOD seeks to achieve in our partnerships. Starting with the contributions of training, skills and financial support volunteered from within our parishes and networks, River Power Pods will provide innovative technology, producing freshwater and electrical power for communities and schools.

In addition, the project will provide students and school-leavers with skills that will enable some of the poorest members of our human family to create sustainable livelihoods. Beginning in Kenya, this will mean the development of manufacturing capabilities that will be locally owned and managed, self-sustaining enterprises which will in turn facilitate further work by our agencies and partners.

River Power Pod: Responsible, sustainable and fair use of our world's resources – Just One World
